# Cybersecurity Readiness Check

Fast. Structured. Real benefits.

## Are you ready for cybersecurity compliance?

Many organizations lack clarity on their cybersecurity maturity and the path to compliance.

**Our Cybersecurity Readiness Check provides a clear answer within days.**

## What we do

We assess your current state across three key dimensions:

- **System & Architecture**  
Analysis of attack paths and existing security mechanisms
- **Development Processes**  
Secure development, requirements, and V&V
- **Organization & Governance:**  
Roles and cybersecurity processes

## Standards (as applicable)

ISO/SAE 21434, IEC 62443 and/or ISO/IEC 27001.

| What you get                | Your benefits                               |
|-----------------------------|---|
| Clear gap analysis          | Be prepared for audits and certifications   |
| Identification of key risks | Avoid costly redesigns and late changes     |
| Prioritized action plan     | Clear and actionable roadmap                |
| Management summary          | Full transparency on cybersecurity maturity |

## Project setup

- **Duration:** 2–7 days
- **Effort:** Limited involvement of your team
- **Format:** Workshops and focused reviews

**Get clarity about the status of your security and our know-how.**

👉 Let's schedule a short intro call.

**Pick up the thread. Manage the threats.**

With safecubed.

# Functional Safety Readiness Check

Fast. Structured. Real benefits.

## Are you ready for functional safety compliance?

Many companies underestimate the real effort necessary for functional safety conform development according to standards such as ISO 26262 or IEC 61508.

**Our Functional Safety Readiness Check provides clarity - within days.**

## What we do

We assess your current state across three key dimensions:

- **System & Safety Architecture**  
Review of safety concepts and identification of potential weaknesses
- **Safety Engineering Artifacts**  
Evaluation of safety goals, safety analyses, and consistency
- **Development Processes & Methods**  
Assessment of safety lifecycle implementation, traceability, and verification

## Standards (as applicable)

ISO 26262 or EN 61508.

| What you get                | Your benefits                                |
|-----------------------------|--|
| Clear gap analysis          | Foundation for safety case and certification |
| Identification of key risks | Focus effort on the most impactful outcomes  |
| Prioritized action plan     | Jump-start to lead and efficient development |
| Management summary          | Full transparency on safety maturity         |

## Project setup

- **Duration:** 2–7 days
- **Effort:** Limited involvement of your team
- **Format:** Workshops and focused reviews

**Get clarity about your safety development and our know-how.**

👉 Schedule a call and see for yourself.

**Not just another audit. Answers.**

# Safety Management as a Service

Ensure functional safety without building a full internal organization.

We provide experienced safety leadership for your project or organization. We plan, coordinate, and ensure functional safety (ISO 26262/EN 61508) while you focus on development.

## Our Offer

### Safety Planning

Define safety strategy and approach  
Create and maintain the Safety Plan  
Tailor applicable standards to project context

### Safety Lifecycle Management

Coordinate all safety activities  
Monitor progress and compliance  
Ensure consistency of safety work products  
Integrate safety into existing quality processes  
Continuously improve safety processes

### Interface & Stakeholder Management

Coordinate system, HW, and SW teams  
Align development with suppliers and partners  
Support customer communication

### Risk & Issue Management

Identify and track safety risks  
Support problem escalation and resolution

### Audit Preparation

Prepare teams for internal and external audits  
Support during assessments (e.g. TÜV)  
Ensure audit-ready documentation

## Your benefits

Ensure safety standard compliance  
Reduce project and certification risks  
Gain experienced safety leadership  
Improve coordination of all teams

## Deliverables

Safety Plan and strategy  
Status reports and KPI tracking  
Interface agreements  
Audit preparation materials

**Achieve your safety goals.**

With safecubed.

# Project Management as a Service

Deliver complex projects on time, on scope, and under control.

Our Project Management as a Service provides experienced leadership to plan, steer, and deliver your projects successfully.

We ensure transparency, alignment, and execution discipline - reducing risks and keeping your project on track from start to finish.

## Our Offer

### Project Setup & Planning

Define project scope, structure, and milestones  
Create and maintain project plans and schedules  
Identify dependencies and risks

### Execution & Steering

Coordinate project on a day-to-day basis  
Track and report progress, budget, and scope  
Management of changes and deviations  
Track and report KPIs

### Risk & Issue Management

Identify and track project risks  
Support escalation and mitigation  
Participate in problem resolution

### Stakeholder Management

Coordinate engineering teams and stakeholders  
Alignment with customers, suppliers, and partners  
Manage communication and expectations

### Process Alignment

Align project with internal processes and standards  
Integrate quality, safety, and security requirements  
Improve project execution continuously

## Your benefits

Predictable, structured project execution  
Reduced project risks and delays  
Improved transparency and decisions  
Align all stakeholders across disciplines  
Free up internal resources

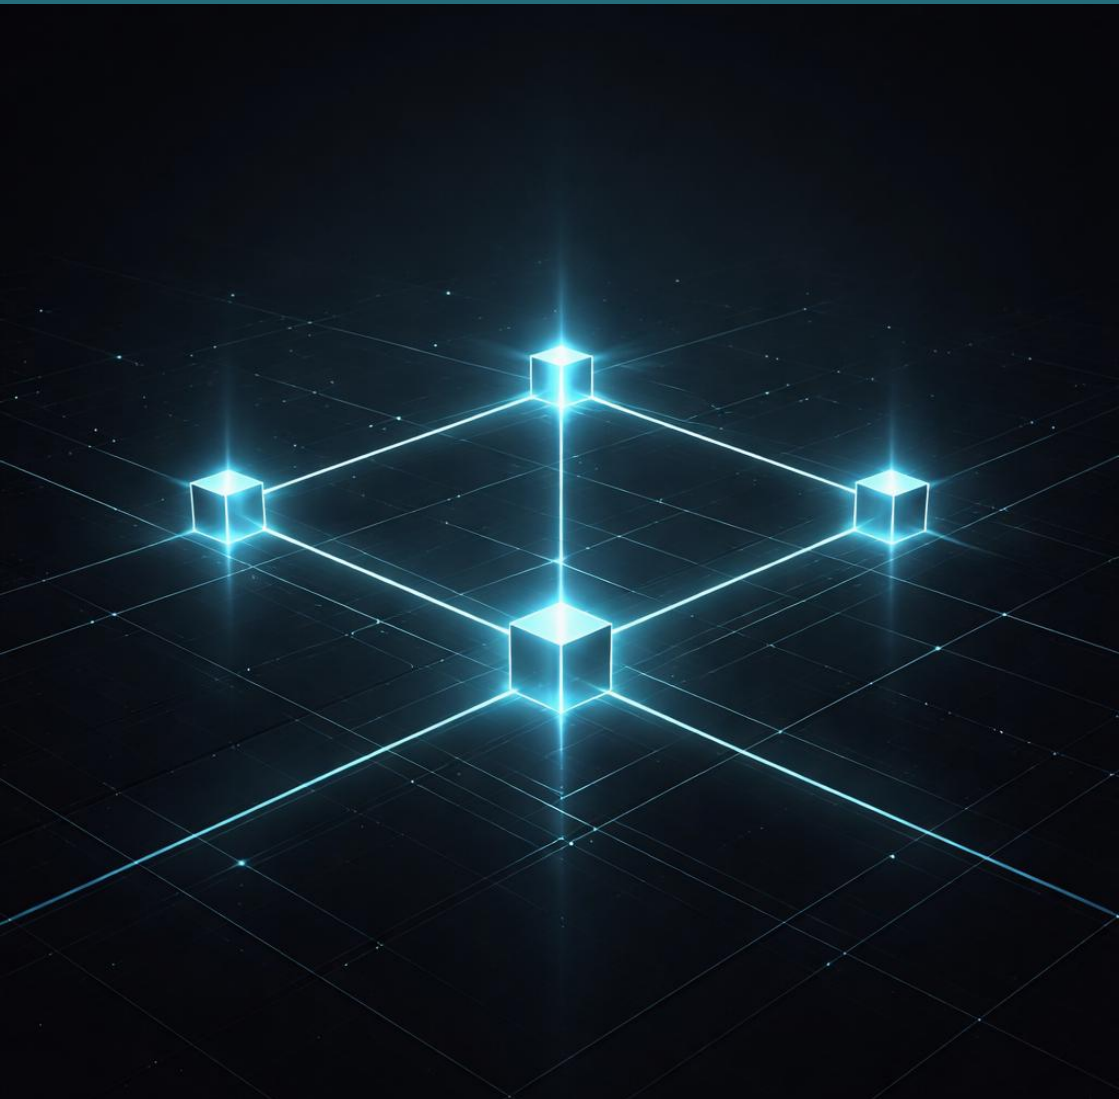

## Deliverables

Project plans and schedules  
Status reports and dashboards  
Risk and issue logs  
Governance framework  
Management-level reporting

**Drop the overhead. Get ahead.**
